

HOW? GUTTER PROTECTION WORKS

Generally leaves and debris that have fallen on the roof, end up in the gutter. If left unattended, it cannot only become a potential fire hazard, but can also block downpipes which in turn can then lead to water spilling back over the gutter line which may cause costly repairs due to flooding.

By extending the roof line to the outer edge of the gutter, Ultraflow Gutter Guard allows leaves to be blown away by normal wind action from the mesh to the ground. Unlike some other gutter guards on the market, leaves are not trapped in the gutter but are actually suspended on the mesh. Ultraflow Gutter Guard is designed to stop leaves and debris from entering the gutter system while allowing water to filter through which is ideal for water tank collections. Also, as vermin like birds, possums and rats are unable to chew through our aluminium mesh, it is the perfect barrier to use against them entering your roof via the gutterline.

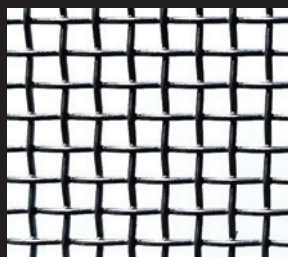

WHY? CHOOSE US 30+

years of experience in
HOME IMPROVEMENTS

With 30 years experience in the home improvements industry, it is our goal to support our customers with the best products available. There are many gutter guard products on the Melbourne market to choose from ranging in quality and efficiency. Some gutter protection systems due to their formation can collect more debris than they clear. The Ultraflow system is designed to extend the pitch of the roof to the gutter line, forming a slope that allows normal wind action to keep your gutter leaf free.

Our products are made from powder coated aluminium making them strong flexible and durable. They will not rust or burn and are compatible with Colorbond® roofing products. Ultraflow aluminium mesh conforms to the Australian standard of building in bushfire prone areas as 3959-2009 and is also the ideal choice for bird proofing and vermin proofing as it cannot be chewed or pulled like some of the other systems available.

ALUMINIUM GUTTER GUARD

Woven Mesh 2mm x 2mm aperture

Expanded Mesh 3mm x 4mm aperture

SUITABLE FOR ALL TILED AND IRON ROOFS

- ✓ **SUPERIOR QUALITY**
Aluminium Gutter Guard
- ✓ **FIXED** Price Contracts
- ✓ **WIDE** Range of Colours Available
- ✓ **FREE** Gutter Cleaning Before Installation
- ✓ **FULLY TRAINED** and Insured Installers
- ✓ **25 YEAR** Installation Warranty
- ✓ **LIFE TIME** Product Warranty

TOTAL GUTTER PROTECTION

We've got you covered

NO MORE RISKY GUTTER CLEANING

By extending the roof line to the outer edge of the gutter. Our gutter guard allows leaves to be blown away by normal wind action from the mesh to the ground.

Unlike some gutter guards, **leaves are not trapped in the gutter** but are actually suspended on the mesh screen.

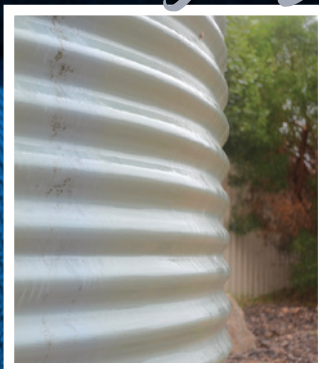

Woven shaped mesh design stops leaves and debris from entering the gutter system, only allowing water to filter through. Ideal for water tank collections.

BE BUSHFIRE READY

Both of our aluminium products have a **fire rating of "0" for non-flammability as independently tested by the CSIRO**. Our woven mesh is also approved for bushfire areas where ember proofing is a specific requirement. The build-up of dry leaves in gutters and valleys is noted as being a potential bushfire hazard.

The installation of Ultraflow Gutter Guard helps prevent this occurring, however lower pitched roofs may find that some leaves and debris may still accumulate, especially on the valleys, therefore it is recommended that periodic inspections are performed during this instance.

HARVEST CLEANER RAINWATER

Ultraflow Gutter Guard 3.5mm mesh has been tested and designed to achieve **maximum rainwater collection whilst eliminating most debris**.

Ultraflow Gutter Guard is powder coated and is drink water safe and if any fine debris enters the gutter it will be filtered out by your tank inlet.

BIRD & VERMIN PROOFING

Pest control experts can get rid of the birds and vermin but are unable to prevent them from returning.

When correctly installed, Ultraflow Gutter Guard will **effectively prevent birds and other vermin from entering your roof via the gutter line**. It cannot be chewed or removed by birds or possums, but to ensure a completely pest free roof cavity it is recommended that all access areas including chimneys and gable ends are attended to as well.
