- ✓ Reduces Your Carbon Footprint
- ✓ Non-Invasive Installation (No Drilling into Your Walls!)
- ✓ Lifetime Warranty
- ✓ Australian Made

Your walls are one of the largest surface areas of your home, meaning that all the heat is being lost through them in the winter and gained through them in the summer. In fact, up to 25% of heat transfer occurs through your walls in an average home. However, 95% of homes older than 10 years have NO WALL INSULATION. You might as well have left the front door open whilst putting the heater on.

Snug in the Winter; cool as a cucumber in the Summer. Cavity Shield gives your home year round comfort whilst protecting your home from termites. Come home to your own slice of paradise.

Book Your Home TODAY!

INSULATION

- ✓ Reduces Heat Transfer up to 40%
