SKETCH

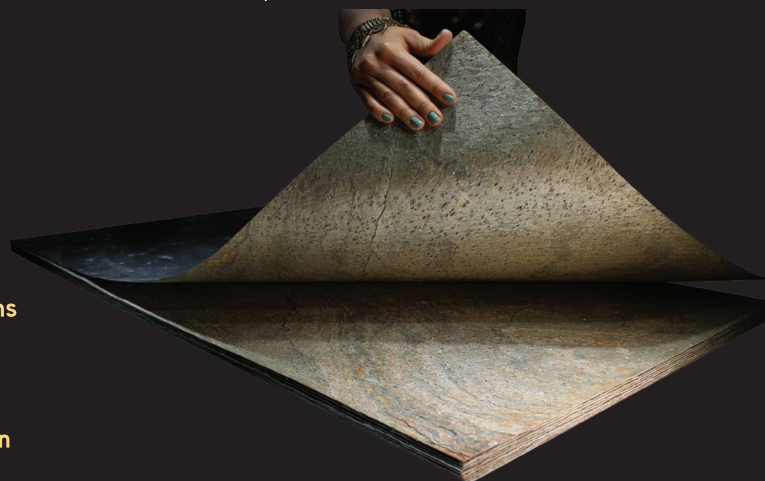

AUSTRALIA

SKETCH natural flexible stone veneers revolutionising the building industry.

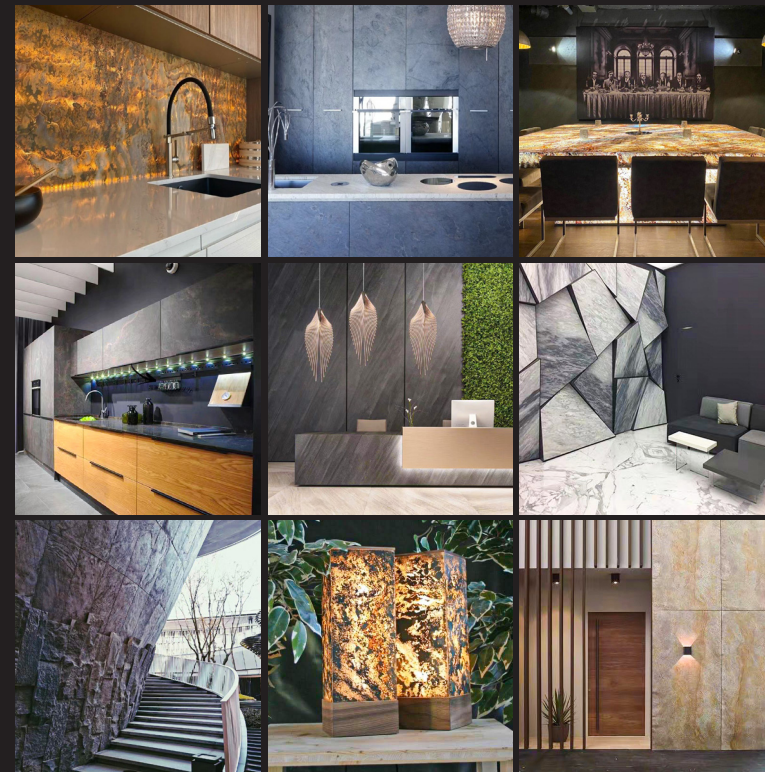

@SKETCH Australia, we are promoting Environmentally friendly and sustainably sourced products. Sketch flexible stones are made by extracting a thin layer from natural stone blocks using a unique technology. With this technology, one stone block can produce multiple stone sheets minimizing the carbon footprint.

Applications for the range of SKETCH thin stone veneer is almost limitless so quite apart from creating stunning feature walls the number of differing applications is limited only by your creativity. It can be applied internally and externally with equal effect.

The only stone product that is DIY. No costly structural changes needed, and no prior technical knowledge required to install.

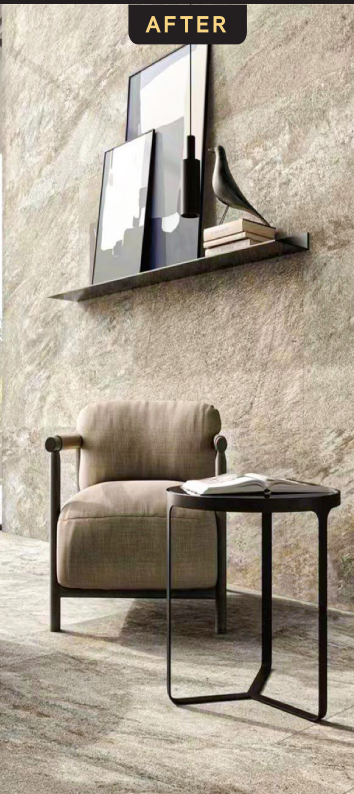

LARGEST FLEXIBLE STONE COLLECTION IN AUSTRALIA
