

HOW IS STAMILYTE MADE?

Mother nature made StamiLyte over many millions of years. We discovered 18 million-year-old fully intact pure artesian springs with all the 21 essential minerals and trace elements as mother nature intended in Western Australia.

It is a myth that salt is rich in minerals and trace elements. Unfortunately, today's mass-production methods of salt making involve heating and filtering that remove the minerals our bodies need. Ordinary table salt contains high concentrations of micro-plastics, sewage, heavy metals, marine fuels and even radioactive materials because it comes from our polluted seas and oceans. The salt, minerals and trace elements within StamiLyte are pollution-free because it comes from underground springs kept away from human interference.

Our StamiLyte is full of all the 21 essential minerals because there is no processing such as evaporation used.

WHAT IS STAMILYTE?

StamiLyte is a natural and mineral-rich electrolyte drink concentrate with all the 21 essential minerals and trace elements our bodies need. 500ml of our concentrate makes 50 litres (100 500ml servings) of electrolyte water ready to drink and fully hydrate you. 10ml of StamiLyte has around 1500mg of salt, minerals and trace elements. As a result, it will increase your energy and prevent dehydration that occurs from strenuous exercise.

We source StamiLyte from pure 18 million-year-old mineral-rich artesian springs in Western Australia.

WHO ARE WE?

We are a group of people searching for the fountain of youth. Our research shows that pain and many diseases result from mineral and trace element deficiencies in our bodies. These deficiencies are mainly due to eating foods grown on mineral depleted industrial farmland. Also, as we age, our stomach acids weaken, and our intestines are less effective at absorbing nutrients, affecting our digestion.

With StamiLyte we aim to help eradicate many diseases and reduce people's suffering by keeping their minerals and trace elements topped-up to levels our bodies need.

StamiLyte™

**GIVES
YOU LIFE!**

WHY DRINK STAMILYTE WATER?

StamiLyte is an electrolyte drink that increases your energy levels and hydration during exercise. Consuming StamiLyte daily will replenish your body's 21 most needed essential minerals and trace elements. As we age, it is harder for our bodies to absorb these nutrients from food and other supplements. StamiLyte contains just enough of these nutrients so that your body gets what it needs. Our bodies are unable to efficiently absorb mineral supplements in tablets because they are not in a dissolved ionic form. Alternatively, if the body is not getting enough of these essential minerals, it can adversely compromise your immune system leading to serious illness.

HOW DO YOU TAKE THE STAMILYTE CONCENTRATE?

For strenuous exercise mix 10ml (two 5ml teaspoons) of StamiLyte Concentrate with one litre of water or juices. Pour the mixture into a bottle and seal tightly. Shake well to blend. Makes 2 x 500ml servings.

For your daily normal minerals top-up we recommend mixing 5ml (one teaspoon) or less of the StamiLyte Concentrate with one litre of water or juice.

Storage: Store in a dry cool place and refrigerate after opening.

HEALTH BENEFITS OF THE STAMILYTE MINERALS & TRACE ELEMENTS

We believe that the secret sauce for staying young and healthy is making sure that your body is adequately supplied with all the 21 essential minerals and trace elements. Even in small amounts they are needed as cofactors in many of your hormones and enzymes to keep your organs and skin healthy and shiny. Some of the minerals and trace elements in the StamiLyte Concentrate are transdermal meaning they will pass through the skin and help in nourishing it.

- Aluminium: Providing a safe barrier to infection.
- Boron: Supports metabolic processes.
- Bromide: Its essential for tissue development. Also needed for good sleep.
- Calcium: Imperative for bone health.
- Chloride: It helps maintain proper blood volume, blood pressure, and pH of your body fluids. Builds beneficial stomach acids for good digestion.
- Chromium: Helps to move blood sugar from the bloodstream into the cells.
- Cobalt: Is used in the body to help absorb and process vitamin B12.
- Copper: Helps maintain healthy bones, blood vessels, nerves, and immune function.
- Fluoride: Used to improve dental health.
- Iodine: Promoting thyroid health.
- Iron: Helps to preserve many vital functions in the body. Strengthens the red blood cells.
- Lithium: Known for its mood stabilizing properties.
- Magnesium: Magnesium is vital for the proper functioning of hundreds of enzymes.
- Manganese: Strong antioxidant properties that helps to reduce disease risk.
- Molybdenum: Acts as a cofactor for important enzymes.
- Nickel: Is an essential nutrient in some chemical processes in the body.
- Phosphorus: Main function of phosphorus is in the formation of bones and teeth.
- Potassium: Lowers blood pressure.
- Selenium: Boosts your immune system.
- Sodium: Balances fluids in the body.
- Strontium: Boosts bone formation.
- Sulphur: Improves skin rejuvenation.
- Titanium: Helps regulate and balance the flow of energy.
- Vanadium: Improves athletic performance.
- Zinc: Regulates immune function.
