

DVS® EC CONNECT RANGE

NZ designed and manufactured - Internet connected ventilation systems.

DVS® is breaking new ground in air quality management and condensation control for your home. The Connect series is our fifth generation of product and our best so far! Connected to the people who can help you!

DVS® Connect systems can be connected to your home Wi-Fi router. This means when we make improvements to the system software we are able to send them to you without the need for a potentially costly service visit.

Humidity, Temperature and CO² “under control”

The combined technology, connect-ability, and features available from the DVS® Connect range of ventilation system cannot be compared.

Humidity Sensing and control.

The Humidity Sensitive control function constantly monitors humidity levels inside your home and in the air supply. Automatically adjusting to ensure that only air which will keep your house healthier and drier is introduced.

Carbon Dioxide (CO²) sensing and control.

Closed windows trap air filled with contaminants and Carbon Dioxide (CO²) that cause discomfort, fatigue, and lack of focus and can make your in-home climate unhealthy.

The DVS® Connect range constantly monitors CO² levels. When the CO² reaches an unhealthy level, the system automatically increases the level of fresh air being introduced into your home. This minimises any risk brought on by having too much CO² in your air. And is also great for getting a good and refreshing night's sleep.

The CO² sensors are a remote wireless device and can be positioned in up to four places in your home.

Temperature (DVS® Premium Connect only).

The temperature sensing function allows the DVS® Premium Connect positive pressure system to react to differences in air temperature (comparing the air supply to the air inside of the home). Adjusting the air supply automatically to make best use of free warmth when it is available and then slowing to a minimum ventilation rate when the air is cooler. You are able to adjust the aggressiveness of the system according to what you want to achieve with your DVS®.

DVS® Connect Controllers - Internet capability

The controller offers personal control of your home environment, all through an easy, simple to use, interface. Your system will be configured for you, and the airflow and settings individually calibrated to the size of your home to run automatically. However, you are able to easily adjust the system functions or fine tune the fan speed to better suit your needs or use the Fan Boost option for clearing the house of extra moisture or smells.

The Connect Control systems are WiFi capable and so can be connected to your home internet. This allows you to download any software updates we make available when we are improving our systems.
