- Quality NZ Colorsteel
- Custom made to suit
- Seriously strong design

Why buy a GARY'S GARDEN SHED?

At Gary's Garden Sheds we pride ourselves in offering the best quality shed on the market at affordable prices.

They are built to last using thicker gauge steel than other products on the market. We encourage our customers to come and visit our showroom and inspect our sheds as the quality speaks for itself.

At GGS we take pride in being:

- ✓ **NZ owned**
- ✓ **NZ made**
- ✓ **NZ sourced materials**

Garden Shed Specialists

Gary's Garden Sheds is a NZ owned family business which has specialised in garden shed design and installation for 30 years. We are proud to produce a quality NZ made product.

Free Installation

NO installation or construction problems.

We want to make purchasing a shed as easy as possible, so will look after you through the whole process. Once we have helped you choose the right design for your site our experienced shed builders will take care of the installation – easy.

**Free installation is only on a flat Auckland site. There is a surcharge for out of area and sloping sites.*

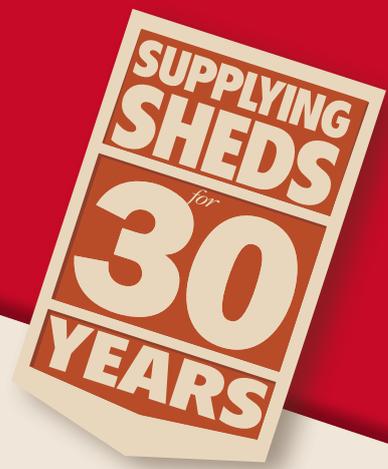

Custom Made

Each shed is custom made to your specifications allowing you to get exactly what you want. We will help you choose the colours, window and door placement, roof types and other optional extras if required.

Warranty

Our sheds are built to last using quality New Zealand sourced products and a proven design therefore we are happy to offer a 15 year warranty on our Colorsteel cladding.

Roofing

Depending on the size of the shed we have two types of roofs – Lean-to or Gable.

Lean-to styles are available on small to large sheds up to a maximum depth of 2.2m. Lean-tos slope towards the back and have a gutter running along the back length. The roof slope can be reversed to allow the water to run towards the front – useful if wanting to direct the water flow away from the house.

Gable sheds can be built with the gable facing the front or the side depending on the size of the shed. Gables are available on our medium to large sheds and have the gutters running along both low sides.

Colours

Our sheds come in either **two toned** or **all-in-one** colours. Choose the cladding from our large range of Endura Colorsteel colours (listed on opposite page). Next choose a trim colour, often Ironsand or Karaka, however please speak to us about other trim options if preferred. We are happy to help recommend a colour to match your chosen cladding.

Commercial

Our strong design makes our sheds a popular choice by sports clubs, kindergartens and schools to provide a secure storage solution. We also work with commercial sites installing custom made designs to suit their needs including sheds for basement/carpark storage or vented sheds for compressors or machinery.

Specifications

- We use roofing quality NZ Colorsteel Endura 0.4mm high tensile steel for extra strength and durability. Ideal for NZ's harsh conditions.
- Extensive range of colours in the Colorsteel Endura range to choose from.
- Our floors are 18mm treated plywood built on 4x2 H4 treated bearers.
- Standard sheds are 1.9m low side, 2.1m high side (outside measure). Heights are approximate and can be adjusted to work with your site. Extra height as well as lower versions also available.
- Doors are fitted ready to be secured with padlock (not supplied). Extra door brace allowing second lock can be added for extra security.
- **No** corner joins, we fold the steel around the corners for added water tightness and extra strength. Guttering provides easy water run off.
- **No** council consents are required for our standard sizes.
- Customise your shed by adding from our range of optional extras, or tell us what you need and we can work with you to make it happen.

Base/Flooring

Your shed can be built directly onto lawn, concrete or decking. Our professional installers will make sure your shed base and floor is secured and level on your site using H4 treated timber and 18mm plywood flooring. A steel channel is wrapped around the base of the shed which the Colorsteel cladding is secured into. The cladding falls below the plywood floor level ensuring that the shed stays watertight and secure. Water easily flows away from the channel ends.

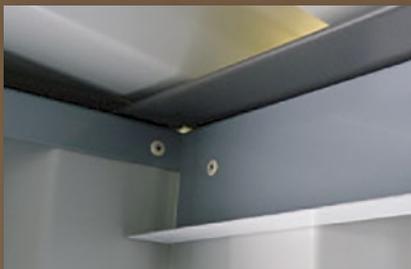

No preparation is required other than providing us with a cleared site which saves you time and money. The timber base allows for flexibility to relocate if required at a future date.

We allow for a slight fall on your site however for very sloped sites there might be a surcharge due to extra foundation work required, we are always happy to discuss your site requirements.

Features

Some of the design features below highlight just some of the reasons that make a Gary's Garden Shed a premium quality product.

Folded heavy gauge channel, riveted for strength and durability.

Doors are fitted padlock ready (not supplied).

NZ Endura Colorsteel offers extreme strength for NZ harsh conditions.

Doors slide on the outside of shed to allow more storage inside.

High tensile steel with 30mm ridge cladding offers exceptional strength.

All our sheds have folded steel gutters to control water flow.

Quality NZ made product, direct from the manufacturer

Optional Extras

Double doors with glass panels.

To get the most out of your shed choose from our range of optional extras. We are more than happy to discuss the range and work out the best options that suit your needs. As your shed is custom made we have the flexibility to place doors, windows, etc. to suit your site requirements.

Louvre window allows natural light and airflow.

Fixed glass window for added natural light.

Paper and netting* for extra protection from moisture and condensation.

Strong and fully braced **hinged doors**. Perfect to maximise access on narrow sheds and extra secure.

Timber framing gives customers a base to attach shelves, hooks, nails etc.

Plywood tool board to organise all those handyman tools.

MDF shelves to maximise storage space.*

Framed workbench.*

Also available: Narrow and 1m wide door options, gutter options for water collections, extra height, base framing – talk to us about your needs.

**Requires timber framing*

Colours

We stock the full range of COLORSTEEL Endura® giving you the opportunity to make a choice that works with your surroundings and reflect your style. It is the most popular COLORSTEEL® choice, a product which can be seen on homes, businesses and buildings right around the country. COLORSTEEL Endura® is made tough, is high quality, low maintenance and durable to resist against harsh NZ conditions, representing the perfect blend of form and function.

Selecting your colours:

1. Choose your cladding colour.
2. Choose your trim colour or opt for all-in-one.
3. Choose your roof colour. Our standard is to match the roof to cladding but you can choose to match it to trim or other.

Colours are indicative only, we recommend viewing exact Colorsteel colour samples before making your decisions, available from our showroom or ask us to send you some.
