## Artificial Turf Specialists

[www.teamturf.co.nz](http://www.teamturf.co.nz)

The last five years has seen a move towards synthetic turf being used in commercial and home applications throughout the country. The continued development in synthetic yarn technology is now producing a realistic, natural turf alternative for the landscape market in New Zealand.

# Home Landscaping Solutions

An all-weather, mud free backyard provides endless hours of usage for kids and pets throughout summer and winter. This low maintenance solution is ideal for small, shady areas on a south side of a house through to full section installations covering the main living areas off decks and pools.

With years of experience in the synthetic turf industry, Teamturf know what it takes to design and build a suitable base for small and large landscaping areas. We remove the topsoil layer, lay a separating layer of geotextile cloth before importing, levelling and compacting a minimum of 100mm of crushed rock ready for the Teamturf surface. Surrounding timber edging will also assist in keeping the base layer in place and provide an edge to secure the perimeter of the turf.

Drainage can be installed under the basecourse layer in low or very wet areas in order to help water get away. In most situations the new Teamturf lawn can be installed flat and the underlying drainage will move the water away during heavy rain. The total process from start to finish will take 3-5 days depending on the size and access into the area.

## Backyard Golf Greens

Teamturf have trialled artificial golf grass putting surfaces from all over the world, and we believe the Team Putt surface replicates the very best of a natural grass golf green. Team Putt golf turf provides an exceptionally true ball roll and realistic speed, providing a great addition to your back yard.

It is exceptionally important that the underlying base is installed correctly, and our team of experts will work with you to provide you with a challenging and enjoyable mini-putt area, with placement of the cups another critical decision in ensuring a successful green that all the family can enjoy.

## Backyard Pet Solutions

Teamturf landscaping surfaces are great for household pets. There are no nasty chemicals used in the manufacture of the turf, dogs especially love it and will treat it just like natural lawn - other than they won't be able to dig it up anymore! An artificial lawn provides a clean and dry area for pets to play on all year-round, no more muddy dog paws to worry about!

# Commercial Grass Solutions

Artificial turf has become an increasingly popular alternative to standard flooring options in many commercial situations.

Its uses can be wide and varied. From a practical and robust gym flooring option to an inviting area within a café or bar setting, a golf putting turf within your office to a special event that requires the finishing touch on the floor. Teamturf has done it all and are happy to assist you in choosing the right product for your requirements.

## Teamturf landscaping turf is great for:

- Muddy front and back yards
- Swimming pool surrounds
- Under trampolines
- Courtyards and decks
- Small areas on a south side of a house where natural grass won't grow

# How to care for your new lawn

## Leaves and debris

The most important thing you need to do to care for your artificial lawn is to remove any leaves or debris from the area every 2-3 weeks. This can be done using a stiff yard brush, which will also assist in lifting the turf fibres upright. If you have a larger section or have a number of trees surrounding your lawn area, a leaf blower is a useful piece of equipment to own. Failure to remove debris may result in algae growing on your turf.

## Weeds

Occasionally a weed will pop up in your turf – this may occur on turf joins, from seeds of nearby trees or from bird droppings. These can be easily controlled simply by plucking the weed out of the sand base, or by spraying with a standard weed killer from your local hardware store. This will not damage the turf.

## Shaded areas

Areas that are shaded for most of the day can stay damp and may develop an area of moss or algae. These areas can be treated using a standard product from your hardware store such as wet and forget or 30seconds. This should not damage the turf in any way, but we do recommend you test a small area of your lawn first for piece of mind.

## Fire

As artificial grass is a synthetic product, BBQ's, braziers, fireworks, or outdoor fires should not be used on or near the turf.

## Pets

Our turf is pet friendly. Simply remove any deposits as you normally would and rinse down the area if any residual waste remains. Pet urine can sometimes cause an odour on occasion particularly in warmer weather. Give the area a freshen up with the hose, or a spray with a pet deodoriser attached to the end of your hose.

# Benefits of teamturf artificial turf

- 8-12 years warranty
- Free up your weekends
  - No watering
  - No fertiliser
  - No mowing

*Your local accredited teamturf agent:*
