## Top 3 reasons to choose our 'F' Series Spray Cork for your home.

### 01 Environmentally Sustainable

There has never been a greater demand to make new construction materials. Unfortunately many of these products deplete our natural resources and have negative side effects. **We are now able to use a greener, natural, renewable resource with positive environmental outcomes that will last for many generations to come.**

### 02 Lowers Utility Bills

Heat and cold enter your home from the outside. Our 'F' Series Spray Cork helps prevent heat or cold from entering, keeping your home warm in winter and cool in summer. This helps you save energy and money. **The cork creates a thermal barrier to lower your utility bills and increase your savings, month on month.**

### 03 Improved Home Exterior with NO Maintenance

"F" Series Spray Cork adds beautiful unique texture and colour to your home, with 400% less fade than other standard coatings! The product will hold its shape or colour regardless of what surface it is applied to. **Unlike render and paint, our product will not chip or crack and needs little to no maintenance.**

## CORK - NATURE'S SUSTAINABLE & RENEWABLE RESOURCE

During cork harvesting, **NO** trees are cut down. Every 8 to 10 years, **ONLY** the bark is extracted from each tree and a new layer of cork regrows. The bark can be removed from the tree many times without causing **ANY** damage to the tree. During extraction the cork tree releases large amounts of oxygen, replenishing the air. These incredibly sustainable trees can live for more than **200 years!**

## DID YOU KNOW?

There are approximately **6.6 million** acres of Mediterranean cork forests. These forests provide income for thousands of families and are home to one of the world's highest levels of forest biodiversity, second only to the Amazonian Rainforest.
