

Introduction

Made in Italy kitchens distributes in Australia the products of CucineLube, the number one manufacturer in Italy, a leader in cabinetry design and technology. From a country with centuries of experience as artisans, craftsman and designers, where manufacturing technology and industrial machinery is one of the largest exports, these products offer significant advantages.

- Environmentally friendly cabinetry, due to compliance with the lowest emission rating obtainable (less than 0.3mg/L, meeting "Super E Zero" and "Japanese F-4 Star" standards), utilisation of recycled materials in a totally solar powered factory, and all emissions resulting from transport are overcompensated for by planting forestry trees.
- A vast range of styles, materials and finishes in both the latest European styles and trends, as well as classic styles.
- A highly sophisticated and technologically advanced production environment focused at producing high quality to price ratios, enabling competitive prices and the benefit of added quality at no extracost.
- A reasonable lead time of around 12 weeks for a complete, assembled kitchen.
- An increased return on investment - at the heart of the house, the kitchen is a highly noticeable feature and the quality of which considerably influences a property's value and success in real estate marketing campaigns.
- The assurance of quality & durability due to adherence with high standards applied to the European manufacturing industry; with thicker carcasses, precision assembly, Blum hinging (standard) and sophisticated finishing application.
- An additional optional and complimentary specialist kitchen design service to identify optimum functionality, aesthetics and cost effective solutions.

Development – Surrey Hills

Render for Surrey Hills project comprising 6 apartments, featuring the unique Cemento (Cement) finishing; highly stylish with its warm grey tone and representing the latest trend. The appeal of this textured, velvety finish is enhanced by its iridescent qualities; displaying an appealing variance according to the position of the light source. Another interesting feature of this kitchen is the unique dynamic splashback, where accessories are connected to the surface by magnetic force, and totally movable across the entire surface.

Development - Ivanhoe

Providing cabinetry in a high level 30 apartment development in Ivanhoe; the cabinetry finishing in a combination of white and corda wood grain lacquer in handleless style with integrated handle and aluminium finger rail, complimented by Dekton splashback & benchtop with waterfall.

Kitchen Renovation

Featuring the unique mortar finishing in old black combined with the nanotechnology laminate known as Fenix, a perfectly tailored, modern design enabled innovative solutions for our customer's specific functional and aesthetic requirements.

The design provides the sensation of a larger space with the aid of decorative panels concealing a structural bulkhead. A visually appealing cabinet conceals appliances with a pocket door mechanism – when open the doors slide into the cabinet remaining hidden. A larger central island with breakfast bar is equipped with drawer units on both sides and downdraft cooktop.

Finishes are the final equation to an enjoyable and beautiful space. The darker colours introduce boldness which blends to perfection with the rest of the house. The island's monolithic impression was achieved by the mortar panels giving a handcrafted look. The back wall is a complete layer of solid matt Fenix. Matt white glass overheads break up the dark colours lighten the overall effect.

Our customer was delighted with the result. “I wanted a lot, but in the end, we didn't have to compromise, everything fit in perfectly” she said.

“The most valuable thing was working with The Made In Italy Team, developing a sense of trust which enabled me to have the confidence to create something I wanted, even though I'm not a designer myself. They were always open and happy to discuss things and helped me find the solution I wanted.”

New Build – Bells Beach

For this Bells Beach Country House the laminate finishes of Cement and light white timber were boldly contrasted with the yellow open shelving and bookcase. The homeowners wanted a little splash of colour and the final result was stunning. For such a big kitchen, the layout and finishes chosen made it a cosy and comfortable place to cook and entertain.

New Build - Parkdale

Contrasting the darkness of the ultra matt black Fenix with the white finger-proof cabinets was a success in this kitchen. The aluminium finger rail, with especial effect of titanium, breaks smoothly between both colours and allows the design not to have any handles, making it very current with the latest trends in Kitchen design.

The LED lighted and magnetic splashback it's an incredible feature that not only compliments the lighting of the space, but also works as an extension of the bench. The variety of accessories it's playful and enjoyable to the spectator.

The space allowed for the kitchen was not big so a lot of considerations were taken in count to make it as functional as it is beautiful. Extra cabinets are displayed in the front for more storage, but are balanced with a seating area that serves as a breakfast bar. Full-extraction drawers were used for better visibility and reach at the time of cooking; plus a bin pull-out and internal accessories makes the kitchen a more easy-to-use place. The lower kicker, a new contemporary style, allows the cabinets to be larger than usual and the storage space grows with it.

New Build – Parkdale - unit 2

Kitchen Renovation - Donvale

Classic white laminate is softened by the unique soft grey Cemento (cement look) laminate blending with the grain of the stone benchtop. The sink with innovative design features includes concealing stainless steel & glass sliding panels. Ample storage is provided by drawer and multiple pantry units.

Kitchen Renovation – Frankston

The range by Cucine Lube offers a number of interesting veneers; here we see the white aged oak veneer tall units with textured vintage finish. Combined with mortar old black, a magnetic splashback and white glass overheads, it provides an interesting and unique combination effortlessly blending together.

Kitchen Renovation – Vermont

At first the design we presented was not what the client anticipated, but they decided to look outside the square, and they were so glad they did. We proposed adding interest to the space with a combination of unique features.

White glossy lacquer with grey aluminium finger rail adds a striking look in perfect company to the other darker toned cabinets, splashback and benchtop. Functionality is maximised by a number of interesting aspects. The pantry unit conceals appliances and provides an extendable shelf. The overheads with integrated blackboard above a splashback which provides connection of mobile accessories - a towel holder, tablet holder and shelf.

“It’s a beautiful design and we really love it. Everything blends in nicely, for us it’s perfect and nice to live with.”

“We had already put a lot of work into researching what we wanted in the kitchen, and we really wanted that WOW factor. We presented a challenge, but all the things Made In Italy Kitchens put into the design exceeded our requirements.”

Manufacture

Cucine Lube Group

Established in 1967, the company quickly became renowned for the quality of its products and bold business strategies. LUBE was shortly established as a widely known brand by 1974 when it began a remarkable period of expansion, increasing both its production capacity and involvement in technological research. In 1993, restructured as the LUBE Group, the company continued to grow until reaching the prestigious position which it occupies today - the number one kitchen producer in Italy and the first manufacturer to be certified GREENGUARD Gold.

The advanced technology of the production facilities and machinery enable a highly efficient production process, where over 350 kitchens are manufactured to precision daily in a 100,000 square meter facility, and economies of scale are passed on.
