

Which variety?

FUN FACT: Different trees/flowers give different flavours and colours! All our honey is 100% RAW.

Bush Honey - Sourced from the far northern suburbs of Perth, not as sweet as Wildflower but flavours will change throughout the year with the change of flowers.

Wildflower - Sourced from the south west, usually sweeter than Bush Honey but flavours will also change throughout the year.

Red Gum - Thick and bold in flavour. Not too sweet, definitely our most popular variety. Being lighter, it is also quicker to crystallise than others.

Blackbutt - Thick, strong and rich! Golden syrup like but with a butterscotch flavour. You either love it or you don't.

Jarrah TA35+ - Known for it's medicinal benefits (higher than all other honeys) and it's beautiful caramel flavour, this is a highly sought after honey. The Jarrah trees only flower every TWO years and being lower in glucose than other honeys means it's great for diabetics!
