Patrick Wray  Landscape Architect

LANDSCAPE DESIGN AND CONSTRUCTION

OUR SERVICES

Lifestyle Landscape Solutions specialises in creating inspired and innovative landscape design, construction and maintenance services across Christchurch and Canterbury. We provide our clients with the best industry knowledge and advice to guide them in their landscape design process. Keeping up with the most up-to-date landscape trends and pushing the boundaries is at the forefront of our creative garden designs.

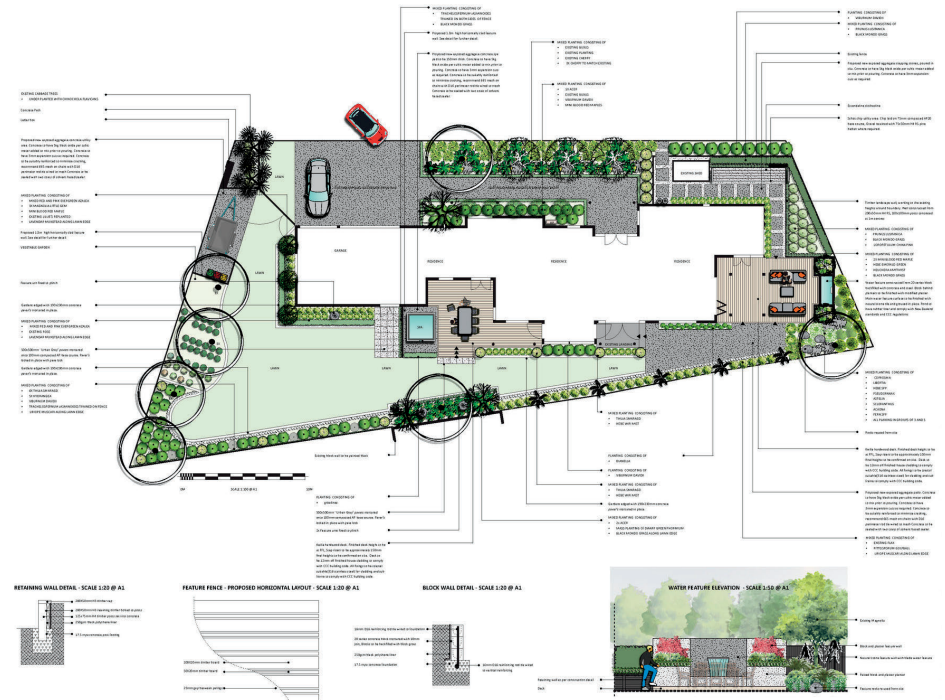

Landscape Architectural Design

All landscape plans are designed by our qualified Landscape Architect, Patrick Wray. We offer a range of landscape design plans and are committed to listening to our client's ideas to turn them into reality.

Concept Plans are drawn to scale with planting information and an elevation or detailed drawing of particular design features.

In addition to the elements listed on the Concept Plan, **Detailed Landscape Plans** include plant quantities and botanic names with added cross sections and elevations to provide detail for construction purposes, local council consent submissions and engineer specifications.

Planting Plans are drawn to scale with a focus on the landscape garden design, including different levels of planting schemes. These plans suit established gardens that require a makeover or a specific planting focus.

Landscape Construction

Landscape construction is the next step in creating your landscape design. By completing both the design and construction, we ensure your expectations are met and no details are missed.

All of our **hardscaping** elements are constructed to New Zealand Building Standards and local Council regulations. We provide clients with the very best industry knowledge and achieve the highest industry practices.

Our **softscaping** elements are installed to the highest horticultural standards and current landscape practices. Our in-depth knowledge of all things planting related is second to none. We can create attractive living elements in your design, supported by excellent soil and garden bed conditioning to give your garden the best opportunity to grow.
