ABOUT US

At Sunstainable, we believe in a future powered by clean and renewable energy, and we have been making this vision a reality since 2010.

Investing in solar power is not just about sustainability; it's also about making a sound financial decision, and moving towards energy independence. Electricity is one of the biggest ongoing expenses for a household.

At Sunstainable, we recognize that our customers want to see a swift return on their investment, and lower their cost of living.

Fundamental to a good return on investment is reliable equipment that goes the distance. That's why we only use the equipment we trust, to extract the maximum value for years to come.

Quality provides value. Cheap systems can cause problems from day one, with concerns ranging from longevity and reliability, to effectiveness and safety. Your peace of mind is important to us. We pride ourselves on quality installations, with premium equipment, so you don't have to waste time and money down the track fixing a job that should have been done right in the first place.

WHY CHOOSE A SUNSTAINABLE SOLUTION?

- **Knowledgeable consultants:** Our consultants have a minimum of 10 years each of experience in the solar industry.
- **Proven Legacy:** Sunstainable has been installing solar power systems since 2010 and has become a trusted name in Solar Power and Battery Storage.
- **Top-Quality Products:** We partner with leading manufacturers to provide top-of-the-line solar panels, batteries, heat pumps and EV chargers.
- **Our team is our own:** We match our quality products with quality installation. We use our own installers cut from the Sunstainable cloth, giving us full control over the quality of your solar installation.
- **Empowering Energy Independence:** Our goal is to help you be less dependent on the electricity grid and move to complete energy independence.
- **Here for the long haul:** We have been installing solar for over a decade and our products come with the longest warranty in the business such as Sunpower Maxeon Panels which come with a comprehensive 40 year warranty and QHOME battery storage have a 15 year warranty - 50% more than other brands.

ARE YOU PLANNING TO BUILD, OR CURRENTLY BUILDING A NEW HOME?

We get involved early and work closely with your builder to ensure the most seamless installation and to maintain your home's aesthetics.

We will treat you and your home with respect.

When you decide to install a Sunstainable solution, we understand that you entrust us with your most valuable asset; your home.

We will never cut corners.

Our own Sunstainable registered installers take pride in their craftsmanship and treat you and your home with respect.

ALL-ELECTRIC HOME

Energy prices have more than doubled in recent years and continue to rise year on year.

Becoming an all electric home enables you to become Energy Independent - generating and storing your own electricity allows you stop paying increasingly large monthly bills to energy retailers, gives you reliable power during blackouts and liberates you from ever-increasing grid energy costs.

It makes financial sense to generate and store your own electricity. Sunstainable can provide a solar and battery solution that is highly efficient, reliable and cost effective. Solar systems are now more affordable than ever before, typically have a payback of 3-4 years and with today's incentives from state and federal governments payback can be even shorter. Becoming an All Electric Home is the smart choice for astute home owners.

As a Sunpower, QCELL and Tesla Powerwall Premium Partner, Sunstainable has access to the latest technology, the best warranties and to the knowledge and support from these leading manufacturers, this, along with our own extensive experience allows us to provide you with a future-proof home solution for all your needs.

PUTTING IT ALL TOGETHER

Solar Panels: Sunlight is full of energy - your solar panels absorb photons from sunlight to generate free electricity for your home. The excess power generated can either be sold to the electricity grid, or stored in your own battery. Sunpower, QCell and Canadian Solar are just a few of the popular solar panel brands that Sunstainable offer.

Battery Storage: Tesla Powerwall and Q.HOME batteries provide seamless back up power during blackouts and stored solar energy at night. Elegant, compact and expandable these industry leading solar batteries can give you the ability to self power your home or even go completely off-grid.

Efficient Appliances: Ditching gas? Choose a heat pump. Heating your hot water with a heat pump uses up to 80% less energy than a conventional electric hot water system and is far more efficient than gas hot water service.

EV and Charger: Our range of smart chargers are designed for the all-electric solar home. The Tesla smart charger allows you to charge your EV with your excess solar generation, and customisable charging from your home battery.

Monitoring: Smart monitoring allows you to see when and how you are using energy. This gives you the transparency over your energy consumption, to help you make the most of your solar and battery system and become energy independent.

TESTIMONIALS

Heanley Family

"Based on the bills we have received since the system was installed (one was actually a credit not a bill) I am very confident that over the whole year we will save in excess of 75%. I would thoroughly recommend Sunstainable to anyone who is considering solar power."

- **James**

Hand On Industries

"We are very happy with the professional service that we received from Sunstainable from bill analysis to installation to leaving the site clean and tidy when the installers finished the installation."

- **Gerard**

Wolf Engineering

"Sunstainable installed a 35kW solar plant on our two adjacent engineering factories. We have been more than delighted with the excellent service and attention- from the initial analysis of our energy usage and requirements, presentation of options, and the quality completed installation. Bill and Izy are to be congratulated for their efforts. I have no hesitation in recommending Sunstainable for commercial solar applications. These guys are all over it!"

- **Karl, Thomastown**

NAP NAP Station

"Sunstainable installed a 17kW ground mounted solar power system to power the homestead. We are very happy with the resulting lower power bills and Sunstainable's professional service."

- **Hamish**

Founded on integrity

Peter Elliott

Peter is the Director and founder of Sunstainable.

With a strong background in the renewable energy sector, he saw the need for a high quality solar provider in terms of equipment, installation, leading technologies and real customer service.

This combined with a low cost base infrastructure, ensures his goal: highest quality systems at the most competitive price possible.

Sunstainable's continuing success for more than a decade is testament to this focus and Peter's hands on approach to it's key business operations from small residential installations to large solar farms and factory installations.

Peter and his team will bring their years of experience and genuine desire for the best outcome to bear when working on your project.
