WHY CHOOSE GLIDEAWAY

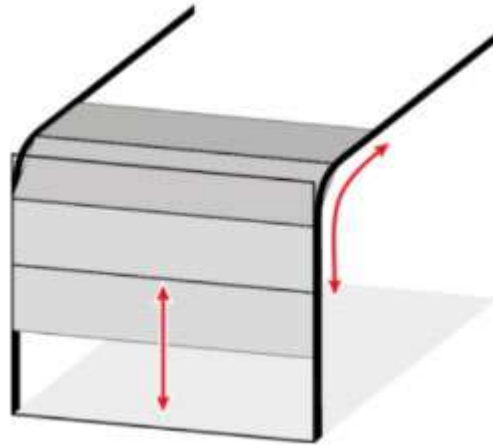

1. Glideaway Doors offer the widest range of door styles and options in New Zealand.
2. Glideaway Doors are custom manufactured to suit any opening size.
3. Over 20 different coloursteel colours and 70+ different powdercoat colours to choose from.
4. Glideaway Doors have a stronger panel construction.
5. Glideaway Doors is one of New Zealand's quietest and most reliable garage doors available.
6. Glideaway Doors manufacture aluminium panels with a 10 year warranty.
7. Glideaway Doors are New Zealand made by New Zealanders.
8. Glideaway Doors is a family owned business with over 40 years experience in the garage door industry.
9. Glideaway Doors provide door solutions and specialize in custom made doors to your own design.
10. Glideaway Doors service the whole of New Zealand.

WHY GLIDEAWAY DOORS ARE NZ'S STRONGEST SECTIONAL DOORS

- Braces bonded in to give additional strength
- Panels are engineered to meet NZ windloading standards
- Torsion struts supplied, required to meet windloading requirements
- Over 40+ years of manufacturing doors to meet NZ conditions
- Strengthened hardware and tracks for wider and larger doors
- Glideaway manufactures some of the largest residential and commercial doors in NZ
- Design and engineering for individual situations available.
- Peace of mind with a higher strength, more secure door system.

THE GLIDEAWAY SECTIONAL GARAGE DOOR

Sectional garage doors are non protruding and open vertically therefore providing most space possible, both inside, and outside the garage.

Some say this style of garage doors are the most practical choice and are the ultimate in garage doors, providing there is adequate space and fixings.

Glideaway Doors have one of the widest range of designs and colours for sectional doors available within the New Zealand market.

With space-saving technology, insulation options and automation, Glideaway sectional doors are safe and robust, whilst providing low-noise operation.

The typical sectional garage door is 4 panels high and the panels are around 500mm high each, if the door is any higher than 2250mm, this would increase the amount of panels generally.

There are endless options to choose from, including different materials, finishes and window options. Available in manual and automatic operation.

Teamed with a 5 year warranty* these garage doors will provide years of trouble free use.

CLASSIC SERIES

SANDON

SANDON
SMOOTH

SANDON STUCCO
(ALUMINIUM)

The deep horizontal ribs across the Sandon provides strength and rigidity over wider widths to help keep your home secure. Smooth finish, with the option for a stucco finish in aluminium, allows the Sandon to suit most styles of architecture.

TIMBERTEC COATING

WHAT IS TIMBERTEC

Timbertec is a high definition timber look on Powdercoated surfaces. Using new membrane technology our supplier uses only materials that have been developed and rigorously tested to international standards.

Timbertec meets or exceeds the most demanding environmental conditions. Using high quality base coatings, the finish is tough, durable and exhibits no wear off as colours and patterns become part of the products coating

ADVANTAGES

- Will not rot, split or twist
- The coating finish is tough and durable
- Requires no painting or staining
- The paint coating will not peel or flake overtime
- Colour match to Aluminum Joinery and front door entrances
- A range of 12 different timber finishes
- The only maintenance required is a wash with warm soapy water

TIMBERTEC COATING

HOW IS IT DONE

Timbertec is a photo imaging process that involves a physical reaction between special inks and the base coating. Under the controlled conditions of heat and pressure, photographic images are fused directly into the special base coating. The inks penetrate the full depth of the coating which creates a natural long lasting timber effect. This process is not an overlay or laminate – it becomes part of the paint coating so will not peel or flake overtime.

GUARANTEE

Timbertec is covered by a 10 year manufactures guarantee which covers correctly specified and applied materials that have been maintained in accordance with AS/NZ 3715. Any warranties must be applied for in writing and are subject to approval regarding application and location.
