

Improving lives
through better
insulation since
1990.

Understanding heat transfer in your home.

Summer Heat Gains

Winter Heat Losses

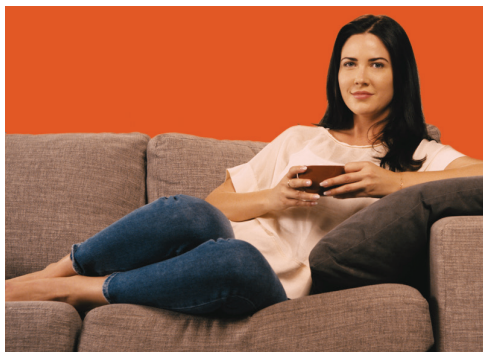

Signs of an uninsulated house.

Living in an uninsulated house can be a horrible experience and can lead to health issues for your family and damage to your home. Typically, if there are areas that are missed with insulation, whether it's the ceiling, underfloor or walls, you'll see a presence of some form of mould or condensation building up. It becomes obvious in bathrooms, behind furniture in your living room and in the back of wardrobes.

Why choose Insultech Insulation?

Insultech Insulation has been installing in kiwi homes since 1990. We are experts in retrofitting insulation in New Zealand where we have proven time and time again that having a Insultech insulated home will create a beautiful warm & cosy living environment and a much healthier home for your family.

Jet Stream Max Ceiling Insulation.

Ceiling insulation could reduce your homes energy loss by over 40%! Jet Stream MAX insulation is a non-combustible, clean and durable blown insulation used to insulate New Zealand roof attics. Chat to us today about insulating your roof cavity!

Cold in winter? Hot in summer? Wall insulation could be the solution!

CosyWall Insulation is specifically designed to be blown into the walls of your home without having to remove the internal linings! The process is incredibly simple and an experienced installation team can usually have the job done in a single day. CosyWall Insulation is a blown mineral wool insulation which is completely safe and poses no health risks to the family. It's blown into your walls from either the inside or the outside through small holes which are then patched up and repainted so you'll never know the process was done.

Installing CosyWall insulation will make your home feel great, and you'll love living in it even more! Talk to the team today to find out how you can have CosyWall insulation installed.

Fast Installation

No Health Risks

50 Year Durability

Thermally Efficient

Up to 35% of your homes warmth is lost through uninsulated walls.

The
perfect
insulation
solution
for your
walls.

Testimonial

Prompt response throughout process, Assessor knowledgable and helpfull, installers on time, very pleasant. We would recommend Insultech.

Julena - Auckland

Keeping your home warm in the winter and cool in the summer.

With colder weather just around the corner, it's time to start thinking about how to keep your homes warm and cosy. One of the biggest factors that help reduce cold air entering your home and keeping the heat in is insulation.

While many homes have ceiling and underfloor insulation, we find wall insulation has generally not been installed or overlooked. This means that for most older NZ homes, heat escapes through the walls making the home difficult to heat, and often leading to other health issues.
