SUSTAINABLE, RECYCLABLE AND STYLISH

RAINWATER HARVESTING TANKS

WHY USE RAINWATER HARVESTING TANKS?

Rainwater harvesting is the perfect alternative for watering your garden.

TAKE BACK CONTROL OF WHEN YOU WATER YOUR GARDEN...

New Zealand is beginning to experience extended water restrictions throughout all seasons. We simply cannot rely on watering our gardens from the hose any longer.

YOU INVEST PRECIOUS TIME AND MONEY IN YOUR GARDEN, NOW REAP THE REWARDS...

For plants, there's no better water than rainwater. It's clean, soft and free. It's much better than tap water and groundwater, which are cold and often hard. Rainwater tanks are therefore becoming an increasingly preferred method of collecting water for your garden.

RAINWATER HARVESTING DOESN'T NEED TO BE UGLY...

Designer Tanks offer a range of stylish above ground rainwater harvesting tanks for your garden which are extremely pleasing to the eye.

RAINWATER IS FREE

GUARANTEED QUALITY

100% RECYCLABLE

Your tank is made from food grade polyethylene plastic. It is 100% recyclable making it a great sustainable option.

PLANTING POD

The integrated planting pod featured in many of our tanks allows you to customise the look of your tank, with plants, herbs or vegetables, the choice is yours.

WEATHER-RESISTANT

Your rainwater tank will be exposed to tough weather and UV conditions. The materials used ensure a long-lasting and attractive appearance.

PROVEN QUALITY

Our manufacturer, Graf are based in Germany and are an innovative market leader in water management. They have been making award winning above ground rainwater harvesting tanks since 1974.

THREADED CONNECTION

A standard threaded connection ensures easy connection of the tap without the need to drill.

THE DESIGNER TANKS STORY

Designer Tanks is the result of Chloe and Ingrid embarking on their very own GOAM – Girls On A Mission!!

In May 2018, Chloe went on an Outward Bound Course and after an overnight mission, was talking to one of the instructors about sustainability. He said he did not want to explain to future generations why we use our precious drinking water to flush our toilets, wash our clothes and water our gardens. This struck a deep chord with Chloe. She went away mulling over the importance of water, how to use it better and how GOAM could be part of the sustainability legacy in New Zealand.

Extensive research proved that rainwater harvesting was very important, not that well-known and most often not an attractive addition to the garden. More research found the Graf Above Ground Rainwater Harvesting tanks provided truly stylish options and more.

Designer Tanks make rainwater harvesting a viable and stylish option for gardens. They offer a wide range of tanks that are ideal for homes, retirement villages and schools, in fact anywhere that appearance and the environment are important.

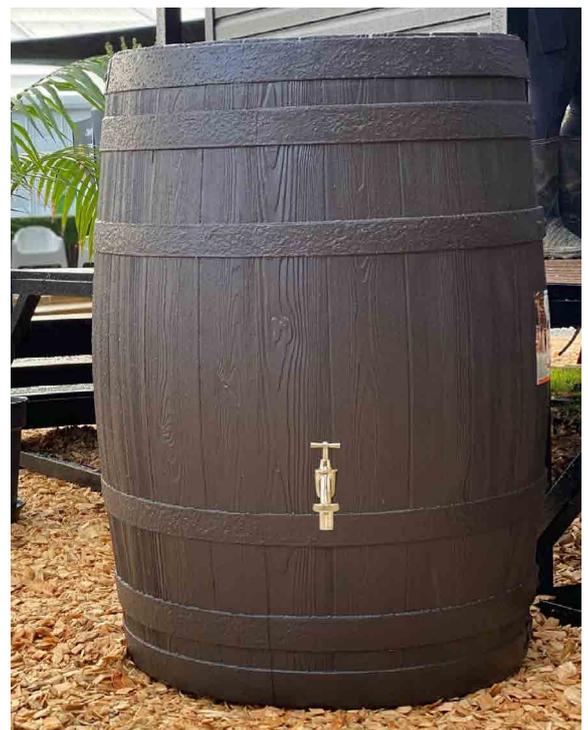

Designer Tanks are now proudly partnered with Just Life Group, which brings a wealth of knowledge and experience to the company.

Ingrid and Chloe are affectionately known as “The Girls” around the office of Just Life Group.

Design details like the beautiful tap and intricate detailing in the finishes are of paramount importance to Designer Tanks.

The classic styling of the Amphora and Barrica pictured above are popular styles.

EVERY RAINWATER HARVESTING TANK COMES AS A COMPLETE KIT

The complete kit includes everything you need to get your Rainwater Harvesting Tank up and running. Included in the kit is a tap, downpipe diverter and even the drill bit! This makes D.I.Y installation easy.

SUSTAINABILITY: AN INTEGRAL PART OF THE MANUFACTURERS DNA

The careful use of water as a resource, the avoidance of environmental pollution and a responsible attitude to people and nature have been at the forefront of Graf's activities for over 50 years. Environmental products should be manufactured in a way that is as resource-efficient as possible. Here's what Graf does for the environment beyond the product.

70% recycled content.

100.000 t LESS CO² emissions through recycling - equivalent to the CO² emissions of 60,000 cars.

80% renewable energy share used in production.

State-of-the-art production facilities for LOW ENERGY CONSUMPTION.

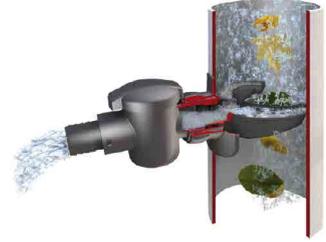

Environmental products for the SUSTAINABLE use of water.

INSTALLATION MADE EASY

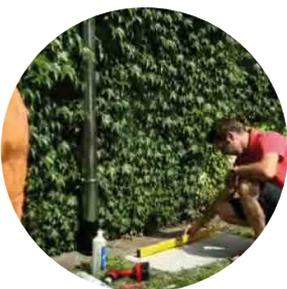

DOWNPIPE DIVERTER

The downpipe diverter collects over 90% of the water flowing through your connected downpipe. Once the tank is full, the diverter automatically pushes excess water back to your normal stormwater system. There is no overflowing, or no need to switch the diverter on or off.

THE TAP

Is screwed into the tank's standard thread connection without the need for drilling.

1. Please ensure the ground is level for the installation of your tank.

2. Drill a hole in your downpipe and tank, using the drill bit provided.

3. Connect the diverter to the downpipe and tank.

4. Your rainwater harvesting tank is now ready to use.

THERE'S A TANK TO SUIT ALL TASTES

CHOOSE YOUR TANK FROM A VARIETY OF SIZES, SHAPES AND COLOURS

Some of our most popular tanks from the Designer Range, from classic to contemporary designs, all made to the highest quality standards.

ESSENTIALS

We also have a range of essential rainwater harvesting tanks from 300 to 1600 litres. These can be seen on our website along with the entire Designer Tanks range, specifications for each tank and pricing.
