moistureMASTER

EXPERTS IN VENTILATION

Over 20 Years Experience
Nationwide

About us...

Condensation Control Ltd have been leaders in the New Zealand Residential Ventilation industry for over 20 years.

Specialising in highly efficient heat recovery air distribution & filtration systems, we have carved out a reputation by providing high quality and great service at affordable prices. Utilising strong relationships with the very best European ventilation manufacturers we not only make this technology available to New Zealanders but adapt it to provide the best solutions for New Zealand homes.

Our signature brand is the very successful moistureMASTER which is available in variations from positive pressure input ventilation to high efficiency heat recovery ventilation systems.

moisture MASTER HX Heat Recovery Systems

The moistureMASTER heat recovery system utilises a high efficiency counter cross flow aluminium exchange plate and is manufactured exclusively for Condensation Control Ltd in Germany by Ruck Ventilatoren. It is specifically designed and engineered for New Zealand climatic conditions and includes features that are not incorporated into other systems.

For existing homes or new builds that are more of a "standard" construction with a usable roof cavity, the moistureMASTER HX systems are the most economical to install without compromising performance. The system has been designed in a modular format to allow for easy installation through "normal" ceiling access and assembled in the roof cavity. We believe this is by far the most innovative system available to New Zealand homeowners.

BRINK CLIMATE SYSTEMS

Based in the Netherlands Brink Climate Systems specialise in balanced heat recovery ventilation technology. They are leaders in Passive House Certified residential solutions and have a long history of innovation in design. Brink have a large and growing range of models which allow a very wide range of design and installation possibilities and we are proud to represent them here in New Zealand.

MELTEM VENTILATION

The Meltem through wall de-centralised heat recovery ventilation system is an innovative solution where a centralised whole-of-home ducted system cannot be installed. The design makes it ideally suited to smaller spaces or apartments. The system is designed and manufactured in Germany and is Passive House Certified
