Automation Possibilities

Quality brands used by Tecport

WHAT YOU MUST KNOW WHEN LOOKING AT HOME AUTOMATION...

Tecport utilises Zennio KNX based technology, the world-wide standard for home and building control, supported by over 400+ manufacturers.

Most automation systems are proprietary, locking you into a single vendor, limiting the level of integration. If your vendor was to cease manufacture of the system you bought, would you be left with a house full of unsupported technology?

While a proprietary vendor has a single solution, KNX vendors have hundreds.

KNX is an open fully scalable automation solution, allowing for a high level of integration resulting in energy cost savings, convenience and simplicity that enhance your quality of life.

By choosing KNX your investment is protected, it allows products of today to easily integrate with products and technology of tomorrow.

Home Automation Features

Lighting

Great lighting makes a great home. Our automated lighting control offers an eco-friendly solution providing savings, ambience and style. Our movement sensors can control lighting triggered by movement and light. When leaving your home just the touch of one button is all it takes to switch off the entire home.

Cameras/Security

Feel safe with Tecport. Your family's safety is number one and security is something that most people consider in their new home. Use our wall touch panel or your phone to arm or disarm your home security. Get a notification on your phone if you have left a door open. View your cameras if there has been a disturbance...

Motorised Shading

Take it to the next step and automate your shading systems with Tecport. One press and all blinds are lowered giving you instant privacy or preventing your home heating up from the sun. High level windows which are difficult to access can easily be controlled and a weather station can be added to monitor wind and rain activity for external shading systems. Shading can include but is not limited to blinds, shutters, louvres, windows, folding arm awnings, ext café blinds.

Entertainment

Cinema and multiroom audio is a nice feature in your new home. Let Tecport tailor a solution to your budget allowing for ease of use and ultimate flexibility. Use our wall touch panel or your phone to control music throughout your home. From online international radio stations to local content or just watching Netflix in your home cinema, all is possible with Tecport.

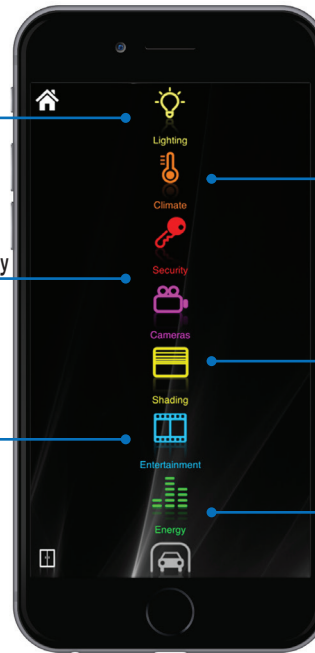

Climate Control

Climate is an essential feature. Our light switches contain temperature sensors allowing the system to know temperatures of each room within the home. Having this information allows for ultimate distribution of heating and cooling where needed. Due to KNX technology all the major brands are supported eg. Daikin, Mitsubishi, Panasonic, etc.. Underfloor heating control is also simple to integrate, be it electric for a single bathroom or Hydronic for entire homes.

Energy Management

Have you ever wanted to take maximum advantage of your solar system. Let Tecport manage your energy, it can bring on systems like pool heating or underfloor heating to take advantage or surplus generated energy instead of feeding it back to the grid. You can also check on your system to make sure it is performing to your expectations. It is all possible with Tecport.

Zennio

Zennio is based in Europe, manufacturing high quality automation components. With a diverse range of products from motion sensors through to air conditioning and even underfloor heating controllers.

Zennio are one of the few KNX manufacturers that offer a total solution. Functionality, reliability and ease of use is at the heart of the Zennio product range.

Eve Remote puts your home in the palm of your hand. Combining all your technology into one powerful yet simple to use sleek and stylish interface. Eve is designed and manufactured in Europe. The lightning fast speed of Eve will impress, giving you an instant feeling of control. It delivers the results that you would expect from a remote control solution.
