DESIGN • MAINTAIN • CONSTRUCT

We bring your outdoor vision to life.
Designers and builders of gardens that are functional, sustainable and beautiful.

ABOUT US

Commencing in 2005, Shape and Form has grown into one of Melbourne and Regional Victoria's leading landscape design and construction companies. Offering landscape design, pool design, landscape construction and garden maintenance, we have the ability to implement the whole process from start to completion.

LANDSCAPE DESIGN

Creating an exceptional outdoor space is about effective communication, a skilled team and placing the client's requirements at the forefront of the process.

Our landscape design process consists of a few stages, which are undertaken in a precise order, to produce the best design solutions for your new garden.

Step 1: Initial Consultation

- Our experienced team members arrange to meet with you on-site for approximately 60 minutes to discuss your wants, ideas and your must-haves in the garden.
- We provide you with our own ideas and suggestions based on our extensive landscape experience.
- We discuss construction budget and the cost of landscape construction.
- Following the consultation appointment, we send you a fee proposal for us to create your personalised landscape design.

Step 2: Concept Plan

- The Concept Plan is tailored to deliver a garden based on the design brief formulated at our initial consultation.
- The Concept Plan includes:
 - A 2D scale drawing of your garden with annotations of certain elements in the garden.
 - 3D renders and a walk-through video of your garden
 - 2 x rounds of changes to the concept plan free of charge should they be required.

Step 3: Landscape Masterplan

- A Landscape Masterplan has much more in-depth detail included in the design, with all the information needed to construct your new garden.
- We present the Landscape Masterplan to you at our studio and show examples of specific materials specified in the design, such as paving and lighting.
- The Landscape Masterplan includes:
 - A 2D scale drawing of your garden with annotations of certain elements in the garden.
 - A technical plan outlining materials, levels and drainage.
 - Section elevations of key areas of the garden.
 - An irrigation and garden lighting plan.
 - A planting plan and plant schedule.

Step 4: Detailed Costings

- Once the Landscape Masterplan has been finalised, we can provide you with exact costings for your project, broken down into sections for complete transparency.
- Upon acceptance of the construction quote, a fixed price contract will be prepared for signatures. This ensures that once the contract is signed, the price of construction will not change unless you add or delete items from the project as it progresses.
