

# SUPERIOR CONSTRUCTION

Quality Certified Pool Construction

**A. Cosmetic Layer:** Freedoms chemical resistant and U.V stabilised gelcoat formulated with our exclusive EcoPure™ antimicrobial system is applied.

**B. Corrosion Barrier:** Freedom applies a layer of clear epoxy based vinyl ester resin. Freedom use a clear layer so that air bubbles trapped by application can be identified and removed. Creating a barrier that is completely impervious to water providing guaranteed osmosis protection.

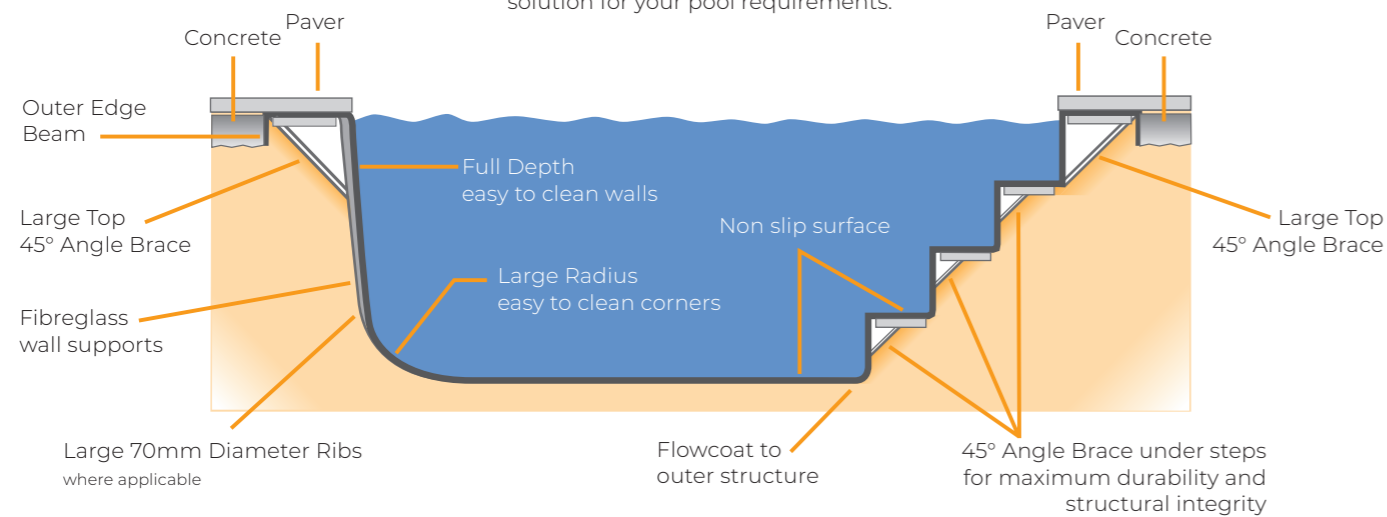

**C. Structural Layers:** 100% clear polyester resin is used in the two structural fibreglass layers. Our clear polyester resin ensures that strength properties are superior for the conditions of Aotearoa. Freedoms polyester resin provides superior flexural strength to the structure which allows it to perfectly accommodate to Aotearoa's mighty ground movements between the seasons. As an added bonus of using fibreglass to build a pool, fibreglass acts as a great insulator.

**D. Close-beam construction** means your pool is built using the strongest method of construction available in the industry.

**E. Outer Surface Layer:** Freedoms black waxed resin outer surface layer is proof that we really do care more than any other pool manufacturer. This formula is applied to seal any exposed fibres and to provide an extra layer of protection against the elements.

## STRONGER BY DESIGN

Over time, we have consistently developed and improved existing design principles and applied them to our pool models. Freedom Pools always provide a high quality and durable solution for your pool requirements.

*Feel the Freedom*

- UV Protection ✓
- Pigment Fading Protection ✓
- Chlorine Damage Protection ✓
