

I use a two-component material that consists of a mineral modified gypsum powder and a water-based Acrylic Resin liquid. These components bond to create a very strong material that is environmentally friendly, safe to work with, and heat and fire resistant.

Each product is hand-poured, hand-sanded and sealed by myself personally and finished to the highest standard.

I specialise in unique mosaic trays and dishes and pride myself on excellent and personal customer service.

My candles and diffusers are hand poured and have been tested by me personally for a number of months.

I use only top quality materials and source from some of the best suppliers.

I use a soy wax blend for my Sculptural Candles and wax Melts and a soy beeswax blend for my tea-lights. Due to the handmade nature and natural state of the wax there may be slight frosting and some minor irregularities from time to time.

I also hand make and create Reed Diffusers with Natural Botanicals and Crystals, and Earrings with Resin features and assorted accents.

All products I use are of the best quality and are as natural and as environmentally friendly as possible. My products have not been tested on animals.
