

# 9 ways to make your home electrically safe

Each year in Queensland around 70 kids under 15 end up in the emergency room because of an electrical injury. More than a third are under five.

## The good news: all electrical shocks are preventable

You can help prevent shocks and burns with these simple fixes at home:

Install safety switches on all circuits to help protect your family from electric shock. Safety switches should be tested every three months by pushing the test button to ensure they operate.

Keep power cords and leads away from little hands and mouths. Small children often want to explore new things by putting them in their mouths, this can pose a risk of electric shock.

Contact a licensed electrician to repair or replace any damaged power points, wall switches, electrical equipment or frayed leads. Damaged equipment can have exposed live wires and cause electric shock. Wrapping tape around damaged leads won't protect you.

Teach older children how to plug in and unplug safely. Before plugging in or unplugging equipment, have the switch in the off position. Take care when you unplug leads as pulling them out with force can damage the equipment, lead or power point.

Install dummy plugs on all power points and power boards. These are specially designed plastic plugs you can insert into unused power point sockets that help prevent objects from going into the power point.

If you're purchasing electrical equipment online make sure it has the Regulatory Compliance Mark (RCM) to ensure it meets Australian safety standards.

Never overload power points by plugging in multiple double adapters. If you need more power outlets you can get more power points installed or use a power board.

If you have electrical work that needs to be done in your home, only use a licensed electrician to do the work. To check if an electrician is licensed visit [electricalsafety.qld.gov.au](http://electricalsafety.qld.gov.au).

Water and electricity can be a lethal mix. Keep electrical equipment away from bath tubs and sinks that children may use.
