

Bluedog Protective Coatings

Offers an extensive range of temporary surface protection coatings which simply roll on, form a tough membrane and peel off when no longer required. Designed to provide up to 12 months of temporary surface protection for valuable non-porous surfaces. Our products help reduce any expensive costs of repairing or replacing your valuable surfaces during renovations, building, construction, commercial operation or home extension.

OUR PRODUCTS

**Australian Made
Australian Owned
Water Based Formulas
Environmentally Friendly**

READY TO USE..

**Rolls on in seconds
Dries in minutes
Protects for months
Peels off in seconds**

WHY USE OUR PRODUCTS?

**Our products protect your valuable surfaces from:
paint, grout, cement, glue,
adhesive, sparks, scratches,
mortar, dropped tools
and general renovation
wear and tear.**

BATHS

Specially formulated to protect:

- Acrylic Baths
- Fibreglass Baths
- Enamel Baths
- Sealed Stone Baths

The temporary bath coating rolls on, forms a tough membrane and peels off when no longer required to help protect against damage to your expensive bathroom surfaces during construction and renovations. The water based formula is environmentally friendly, certified non-hazardous, and provides up to 12 months of temporary protection. Afterwards, it simply peels off to leave your protected bathroom surfaces free of any damaging building debris. Without protection it can cost hundreds, sometimes thousands of dollars, to repair, resurface or replace bathroom surfaces which get damaged during a bathroom renovation. This cost effective protective coating reduces the need for harsh cleaning chemicals, steel scraping blades and abrasive pads to remove renovation debris.

**Not recommended for any unsealed / porous surfaces.*

FLOORS

Specially formulated to protect:

- Sealed Marble
- Fully Cured & Unpitted Concrete
- Epoxy Coated Flooring
- Ceramic & Porcelain, Flagstone, Quarry
- Sealed Mexican Terracotta, Agglomerate, Terrazzo

For up to 12 months, this floor coating can protect new and existing flooring during messy building and renovation processes. It protects against paint spills, overspray, metal shavings, plaster, glues, dirt, dust, muddy foot traffic and much more. Our Australian Made products are recognised as the world's leading product in protecting flooring, preventing scratches and reducing cleaning costs, repairs, resurfacing or even very expensive replacement. The formula has adhesive qualities with anti-slip ingredients, until you peel the coating off. Much safer than sheets of plastic, timber boards or cardboard which can be dangerously slippery when wet and / or a trip hazard.

**Not recommended for any unsealed or porous surfaces.*

BENCHES

Specially formulated to protect:

- Laminates
- Stainless Steel
- Sealed Stone & Marble
- Sealed Non-Porous Granite

Our Australian Made, water-based, eco-friendly protective coatings are non hazardous and protect valuable kitchen benches and similar kitchen surfaces. Applied with a 10mm nap roller, our coating dries to be a translucent, durable and tough coating which protects against renovation and building debris (dirt, dust, glues, silicones, grinding sparks, scuffs and scratches). Without protection, your expensive kitchen surfaces can be easily damaged during the messy renovation and building process. Any little accident can cause thousands of dollars in damage to your new kitchen, a scratch or stain could ruin expensive bench tops and require repair or replacement.

**Not recommended for any unsealed or porous surfaces.*

WINDOWS

Specially formulated to protect:

- Glass
- Louvres
- Low E Glass
- Anodised Framing
- Powder Coated Frames
- Specialised Aluminium Joinery

Our Australian Made products are recognised as the world's leading products in protecting glass windows during the building, construction and renovation process, preventing scratches and other damage. Without protection, windows can be left with irreparable damage leading to expensive replacement. Any debris being scraped off can leave messy scrape marks which then need professional cleaning or replacement (this costs thousands of dollars).

**Not recommended for any unsealed or porous surfaces including acrylic glass and perspex.*
