

Fully Engineered

Our chimneys are fully engineered and compliant with the New Zealand building code and never leak, rot or rust. We provide all chimneys with a certified engineered design, PSI, Memorandum of Design and a 20-year warranty.

"Quality workmanship and attention to detail, outstanding!"

- VANESSA WHITTAKER, EARTHQUAKE REBUILD

Specialists in the design and build of lightweight chimneys and architectural details.

RED MANTLE
Quakesafe Building Solutions

A Shared Vision

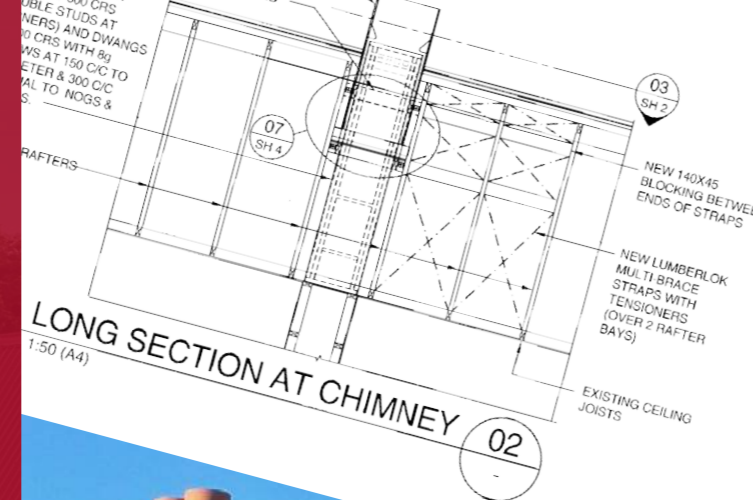

As the saying goes "your home is your castle" and who are we to disagree. You have a vision for your home and are looking for a skilled tradesperson to get you there.

We understand that you demand a combination of design excellence, building expertise and structural integrity. And so you should.

Stunning building solutions that meet the rigours of modern building codes require innovation through craft. A passing of the mantle and a new way of doing things.

We embrace technology but also value the skill and charm of old world techniques. Combining old and new through innovation.

And it's here that we stand apart. Setting a benchmark for building and design. Skilled and refined, a new craft to help you achieve the vision you have for your home.

Unique Composite System

We are at the forefront of innovation and design with our patented chimney system. Developed as a fibreglass shell that is constructed in one piece, our chimneys will never leak, rust or rot. Using thinly cut brick and advanced film industry techniques, we create stunning, safe and secure chimneys and architectural details for your home.

Stunning, Safe and Secure

Stunning – setting a benchmark for building, architecture and design. Our chimneys are embraced by insurance companies, architects and heritage teams alike.

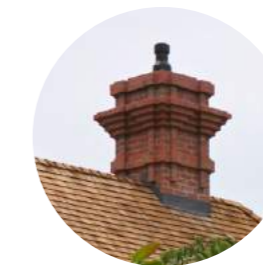

Quakesafe – insurance companies in NZ recognise Red Mantle as a superior solution for chimney replacement. Our chimneys are less than 10% of the weight of a traditional brick and mortar chimney.

Secure – fully engineered and compliant with the NZ building code.

Fibreglass Chimneys

Crafted out of fibreglass, brick detail is moulded into the surface using advanced film industry techniques. Our fibreglass chimneys are perfect for renovations, rebuilds and new builds.

Brick-Slip Chimneys

Ideal for heritage buildings and restorations our brick-slip chimneys are elegant and authentic. They come constructed using a fibreglass shell that is surfaced with thinly cut real brick or stone.

Chimney Pots and Architectural Details

You can also incorporate stunning architectural details into your building project with our lightweight chimney pots, parapets, columns, facades and carved details.

"Exceptionally well made" - MARK WILSON, EARTHQUAKE REBUILD

"Helpful with all aspects of the project and beyond" - MARGARET MEEHAN, HERITAGE RESTORATION
